

Test Scenario	Sign Up
Test Description	Testing sign up flow
Priority	High

Test Case ID	Summary	Actions	Inputs	Expected Output	Actual Output	Test Result	Test Comments
Signup-1	Leaving required details blank	1. Name blank 2. Email Blank 3. Password blank 4. Confirm password blank		1. Requires user to type in name 2. Requires user to type in valid email 3. Requires user to type in password 4. Requires user to repeat password	1. Please fill in this field 2. Please fill in this field 3. Please fill in this field 4. Please fill in this field	1. Pass 2. Pass 3. Pass 4. Pass	When required fields are empty the user is unable to continue, some improvements might include better comments for when certain fields are missing and additionally blanking out sign in button when certain criteria is not met.
Signup-2	Invalid email format	1. Input with no @ 2. Input with no text before @ 3. Input with no .com or similar 4. Invalid Characters	1. "test" 2. "@test.com" 3. "test@test" 4. "test@test." 5. "test@" 6. "test#test.com" 7. "test..@test.com" 8. "test@test..com" 9. "@.com" 10. "test@.com"	1. Invalid input 2. Invalid input 3. Invalid input 4. Invalid input 5. Invalid input 6. Invalid input 7. Invalid input 8. Invalid input 9. Invalid input 10. Invalid input	1. Please include an '@' in the email address 2. Please enter a part followed by '@'. 3. Allowed user to continue 4. '.' is used at a wrong position 5. Please enter part following '@'. 6. Please include an '@' 7. Allowed user to continue 8. '.' is used at wrong position 9. Please enter a part followed by '@' 10. '@' is used at a wrong position	1. Pass 2. Pass 3. Fail 4. Pass 5. Pass 6. Pass 7. Fail 8. Pass 9. Pass 10. Pass	Validation is mostly effective however some validation needs to be reviewed and improved. For example the signup is allowed when the user has no high level domain such as .com or similar, additionally test..@test.com is not a valid email however the user is still able to continue with the signup process.
Signup-3	Invalid password	1. Password less then 6 characters long 2. Password same as username 3. Commonly used password 4. Weak password 5. Invalid password format	1. "123" 2. name = "test123" password = "test123" 3. "admin123" 4. "111111" 5. "aaaaaa" 6. "test 123" 7. ☹️☹️☹️☹️☹️☹️	1. Password must be at least 6 char long 2. Password must be different than name 3. Password must not be commonly used 4. Password must not have recurring characters, not secure enough to continue 5. Password must not have recurring characters, not secure enough to continue 6. Password must be a valid format, no spaces. 7. Password must be valid	1. Password must be at least 6 characters 2. Allows user to continue 3. Allows user to continue 4. Allows user to continue 5. Allows user to continue 6. Allows user to continue 7. Allows user to continue	1. Pass 2. Fail 3. Fail 4. Fail 5. Fail 6. Fail 7. Fail	Simple validation is used to restrict length of password however unsecure and invalid passwords are allowed, this causes vulnerability to the system. Recommendations include adding strict validation for invalid password inputs and easy to guess passwords.

Signup-4	Confirm password	1. Same input as password field 2. Different as password field 3. Empty submission 4. Copy & paste	1. password = "test123" confirm = "test123" 2. password = "test123" confirm = "test122" 3. password = "test123" confirm = "" 4. Copy and paste from password field to confirm field	1. Allow user to continue 2. Passwords must match 3. Fill in field message 4. Not allow copy and pasting	1. Allows user to continue 2. Passwords do not match 3. Please fill in this field 4. Allows copy and pasting	1. Pass 2. Pass 3. Pass 4. Fail	Confirm password validation is mostly functional however users are still able to copy and paste password from password field to confirm password. Enforcement must be made to not allow for that.
Signup-5	Testing out valid selection options for fitness, workout and goals.	1. Allow selection of beginner, intermediate and advanced in fitness. 2. Allow selection of fully remote, hybrid and fully office in work pattern. 3. Ensure work pattern cannot be left blank 4. Ensure fitness cannot be left blank. 5. Ensure single selection of goals in your goals 6. Ensure no goals selected in your goals 7. Ensure multiple goal selection in your goals		1. Allows toggling between levels 2. Allows toggling between work patterns 3. Work pattern cannot be unselected only toggled 4. Fitness cannot be unselected only toggled 5. Single goal can be selected and user may continue 6. No goals selected and the user may continue 7. More than one goal can be selected and user may continue 8. All goals may be selected and user can continue		1. Pass 2. Pass 3. Pass 4. Pass 5. Pass 6. Pass 7. Pass 8. Pass	Validation is well done in the selection menu, it allows for toggling between different levels and work patterns as well as the selection of one goal, multiple goals and no goals. Required fields such as work patterns cannot be unselected.
Signup-6	Next/back button flow testing		1
